PROJECTS

Smart Security system

The Smart Security System is an advanced solution designed to enhance your premises' safety, using Python and cutting-edge technology. It features a warning alarm, real-time image capture, and email alerts. Built with components like Raspberry Pi 4, a camera, and a buzzer, this system offers a comprehensive security infrastructure for your space.

Hospital Management System

Made by using Python (Terminal based)

A 'prototype' Hospital Management system. This system aims to maintain the medical records of the patient, maintain the contact details of the patient and keep track of the appointment dates. There are three different types of users involved in a hospital management system: admin, doctor and patient. Each of the above plays an important role in the hospital management system performing different tasks. Patients using the system can book appointments.
